

PROJECT TITLE

Professional Scientific Calculator Using Java

- Name : Aman Kumar
- ERP : RU-25-10151
- Branch : B.TECH CSE (Ai/ML)
- Submitted to : Mr. Santanu Kumar
- College Name : Rungta International Skills University
- Session : 2025-26

INTRODUCTION

Content :

- A Scientific Calculator is a software application used to perform both basic and advanced mathematical calculations.
- It provides quick and accurate results.

Objectives :

- Perform basic arithmetic operations.
- Implement scientific functions.
- Provide a user-friendly interface.

TECHNOLOGIES USED

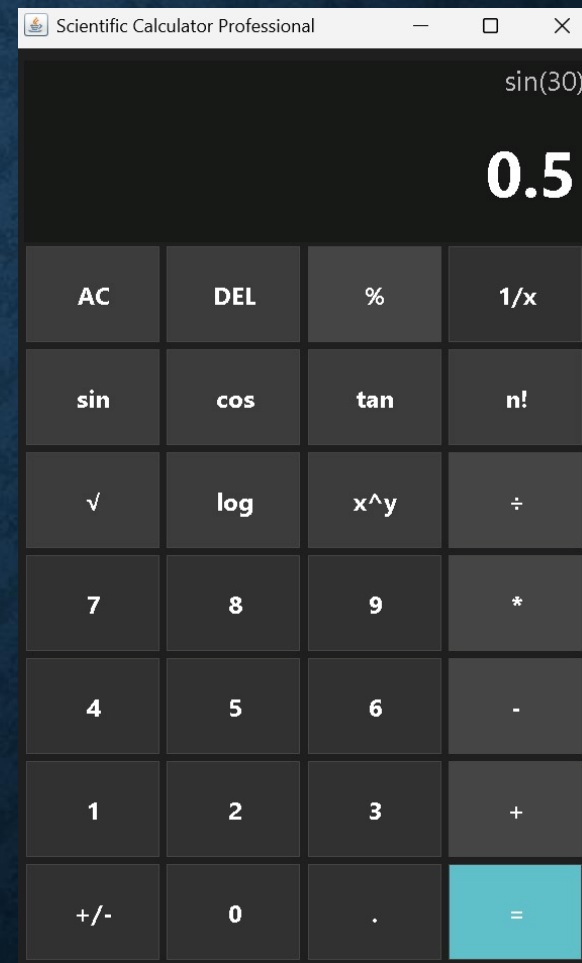

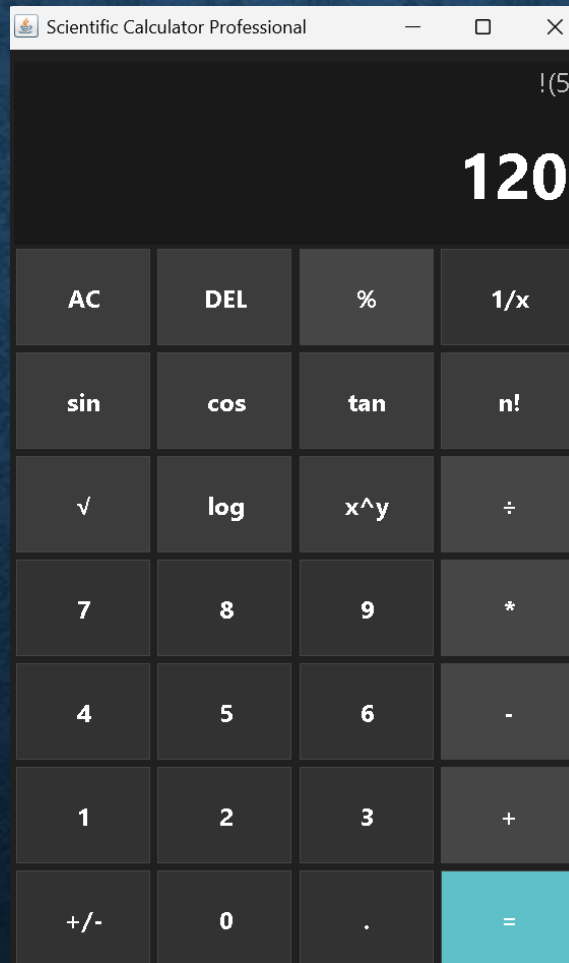

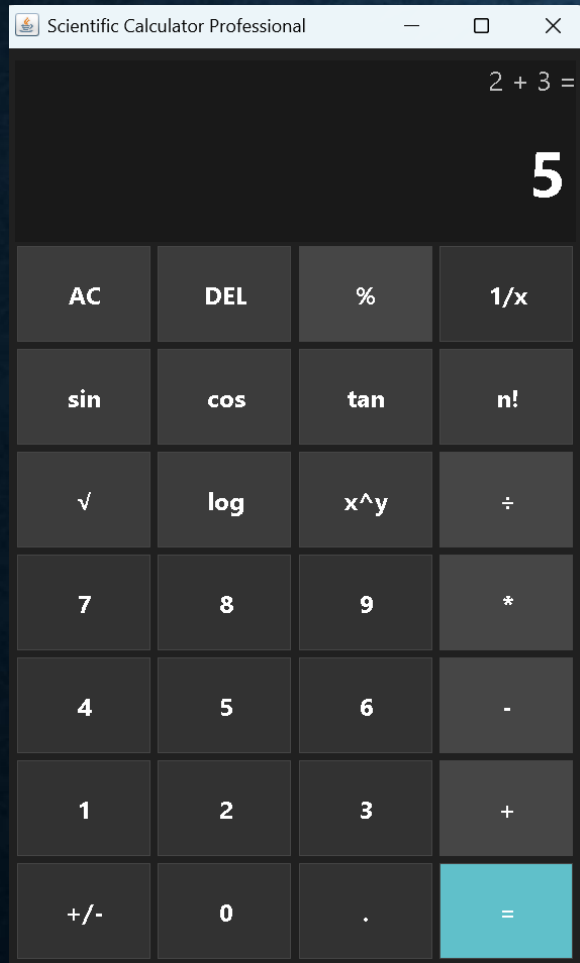

- The core functionality is implemented using the Java Programming Language.
- The graphical user interface is designed using Java Swing, which provides an interactive and user-friendly experience.
- For coding, testing, and execution, development environments VS Code was used.

WORKING

1. User enters numbers.
2. User selects an operation.
3. Java processes the input.
4. The result is displayed.

Flow : Input → Processing → Output

SCREENSHOTS OF THE PROJECT

FUTURE SCOPE

- Add calculation history.
- Implement dark mode.
- Develop a mobile application version.
- Add voice input support.

CONCLUSION

- The project successfully performs scientific calculations.
- It provides accurate and fast results.
- It demonstrates Java programming concepts.

THANK YOU
